Typesetting Linguistic Documents in LaTeX

Mircea Saucic and Steve Politzer-Ahles

Department of Linguistics
University of Kansas

7 October 2010

What is LaTeX?

What is LATEX?

- A *typesetting* language

What is LATEX?

- A *typesetting* language
- Content-oriented

What is LATEX?

- A *typesetting* language
- Content-oriented
- Extendable

What is LaTeX?

- A *typesetting* language
- Content-oriented
- Extendable
- Provides clear organization within a document

What is LATEX?

- A *typesetting* language
- Content-oriented
- Extendable
- Provides clear organization within a document
- Not WYSIWYG

Basics

- TeX file:

Basics

- TeX file:
    - Preamble (header):
        - \documentclass{} (usually article)
        - Header information (metadata, etc.)
        - Packages

Basics

- TeX file:
    - Preamble (header):
        - \documentclass{} (usually article)
        - Header information (metadata, etc.)
        - Packages
    - Document
        - Environments (\begin{document}, etc.)
        - Commands (\emph{}, etc.)

Basics

- TeX file:
    - Preamble (header):
        - \documentclass{} (usually article)
        - Header information (metadata, etc.)
        - Packages
    - Document
        - Environments (\begin{document}, etc.)
        - Commands (\emph{}, etc.)
- Build to PDF or other document format

Lists of examples

Lists of examples

- Use package `gb4e` or `covington`
  - (we'll use `gb4e` for this workshop)

Lists of examples

- Use package gb4e or covington
  - (we'll use gb4e for this workshop)
- \begin{exe} ... \end{exe} creates the example environment

Lists of examples

- Use package gb4e or covington
  - (we'll use gb4e for this workshop)
- \begin{exe} ... \end{exe} creates the example environment
- \ex{ ... } creates an example

Lists of examples

- Use package `gb4e` or `covington`
    - (we'll use `gb4e` for this workshop)
- `\begin{exe}` ... `\end{exe}` creates the example environment
- `\ex{ ... }` creates an example
- `\ex[*]{ ... }` adds a grammaticality judgment
    - (* can be replaced with #, ?, %, etc.)

Lists of examples

- Use package `gb4e` or `covington`
  - (we'll use `gb4e` for this workshop)
- `\begin{exe}` ... `\end{exe}` creates the example environment
- `\ex{ ... }` creates an example
- `\ex[*]{ ... }` adds a grammaticality judgment
  - (* can be replaced with #, ?, %, etc.)
- `\begin{xlist}` inside `\ex{}` creates an embedded sub-list

Interlinear glosses

Interlinear glosses

- Use package `gb4e` or `covington`
    - (we'll use `gb4e` for this workshop)

Interlinear glosses

- Use package gb4e or covington
    - (we'll use gb4e for this workshop)
- \gll for the sentence and glosses (words separated by spaces)
    - make sure there are the same number of words in each
    - end each line with \\ (the newline character)

Interlinear glosses

- Use package `gb4e` or `covington`
    - (we'll use `gb4e` for this workshop)
- `\gll` for the sentence and glosses (words separated by spaces)
    - make sure there are the same number of words in each
    - end each line with `\\` (the newline character)
- `\glt` for the free translation

IPA

IPA

- Use the `tipa` package

IPA

- Use the `tipa` package
- IPA inside the `\textipa{ ... }` command

IPA

- Use the `tipa` package
- IPA inside the `\textipa{ ... }` command
- See the tipa manual for list of IPA codes

Syntax trees

Syntax trees

- Use the qtree package

Syntax trees

- Use the `qtree` package
- Create a bracketed sentence
  - Node labels are preceded with a period, e.g. `[.VP V N ]`
  - Create triangles using the command `\qroof{ ... }.XP`

Syntax trees

- Use the `qtree` package
- Create a bracketed sentence
  - Node labels are preceded with a period, e.g. `[.VP V N ]`
  - Create triangles using the command `\qroof{ ... }.XP`
- Draw arrows using package `tree-dvips`

Tables

Tables

- Use the {tabular} environment

Tables

- Use the {tabular} environment
- tabular formatting is complicated to explain but easy to demonstrate. Check the example!

Footnotes and references

Footnotes and references

- Bigger or fancier bibliographies should use the BibTeX utility. We will just do simple ones today
  - (but come ask us if you want to learn BibTeX!)

Footnotes and references

- Bigger or fancier bibliographies should use the BibTeX utility. We will just do simple ones today
    - (but come ask us if you want to learn BibTeX!)
- The bibliography goes at the end of the document inside a \begin{thebibliography} environment

Footnotes and references

- Bigger or fancier bibliographies should use the BibTeX utility. We will just do simple ones today
    - (but come ask us if you want to learn BibTeX!)
- The bibliography goes at the end of the document inside a \begin{thebibliography} environment
- Each reference is listed there inside after the command \bibitem{*key*}
    - (replace "key" with a unique name for that reference, then you can refer to it in the article text)

Footnotes and references

- Bigger or fancier bibliographies should use the BibTeX utility. We will just do simple ones today
    - (but come ask us if you want to learn BibTeX!)
- The bibliography goes at the end of the document inside a \begin{thebibliography} environment
- Each reference is listed there inside after the command \bibitem{*key*}
    - (replace "key" with a unique name for that reference, then you can refer to it in the article text)
- Put parenthetical citations within the text using using \cite{*key*}

Footnotes and references
